1. Sediment Filtration

5 Micron pre-filter removes particles like dirt, rust and sediment.

2. Carbon Filtration

A specialized carbon block filter reduces chemicals and chlorine.

3. High Efficiency Membrane

Water is forced through microscopic pores to remove contaminants as small as an atom.

4. Pure Water Storage

Stainless steel storage tank - available in larger sizes for more volume.

5. Flex Filter

Standard carbon post filter delivers crisp clean purified water. Customizable options include:

- Calcium for mineral enhancement
- Alkalinity, increase pH
- PFAS and PFOA reduction
